# WELDING SPECIALISTS

---

As specialists in our field, Austin Engineering has a team of experienced technical experts in welding. The team are led by the General Manager of Innovation Dr Nasir Ahmed, a Doctor of Engineering who formerly headed the CSIROs Welding Department.

With a team of qualified International Welding Inspectors, the group are continually reviewing current welding practices in an attempt to develop new and cutting edge techniques and streamline procedures.

Due to this continuous improvement, Austin Engineering has pioneered in industry with the refinement of narrow gap welding for high production mining products, stress relieving (non-thermal) welding, and achieving higher deposition rates.

We also use the latest in automated and robotic welding technology including the largest portal gantry-mounted robotic welding system in Australia.

Further developments are planned for the near future in relation to maximising welding efficiency and effectiveness including improvements in material selection.
