Australian West Coast Operations

AUSTIN ENGINEERING'S WEST COAST OPERATIONS CONSIST OF A CORE FACILITY IN KEWDALE PERTH AND AN ADDITIONAL WORKSHOP ALSO LOCATED IN KEWDALE.

The Perth facility is the engineering hub for Austin Engineering Australia, with a large team of engineers utilising specialist software such as EDEM and ANSYS to produce custom designs for our customers.

Along with the design and manufacture of dump truck bodies and buckets, the West Coast operation specialises in tyre handlers, water tanks and mining attachment products.

Being fully equipped with a large steel processing

section, including full blast and paint facilities, enables the West Coast Operations to maintain quality standards and manufacturing schedules to meet our customers' requirements.

In addition to manufacturing, our operations offer extensive repair and maintenance capabilities including field service mobile units.

As a whole, the supply capacity of the West Coast can accommodate in excess of 40,000 operating hours per month.
